Wood Vinegar

17,000 almond trees across 170 acres — Belehris Estate

55-year-old almond grower and horticulturist in Renmark, Jim Belehris, from Belehris Estate, has been injecting PyroAg Wood Vinegar into the orchard's irrigation system for more than five years and the results are clear.

“Embracing sound and considered sustainable practices such as PyroAg Wood Vinegar gives me the leading edge in sustaining an orchard that is thriving.”

With 17,000 almond trees across 170 acres, Jim has recorded visible differences in the orchard quality and tree longevity. Five litres of PyroAg Wood Vinegar is injected per hectare during growing

season which is around late August and early September, and Jim uses PyroAg Wood Vinegar monthly for three months.

“The growth speed of the trees, their vibrant colour and quality of the nuts are great results which I have seen over the last five years. I am confident that PyroAg Wood Vinegar has played a pivotal role in the soils improvement. PyroAg Wood Vinegar is part of the all-important mix of strategies I use

to create the ideal environment for the almond trees to grow well. I also use a lot of high-quality compost - not raw, microbes as well as molasses. Pesticides are not part of the equation at all which I am very proud of,” Mr Belehris said.

“Embracing sound and considered sustainable practices such as PyroAg Wood Vinegar gives me the leading edge in sustaining an orchard that is thriving. I have always had a mindset in looking for and discovering better horticultural practices.

“Belehris Estate currently produces 150 tonnes of almonds per year and I am confident that that this number will reach to well over 200 tonnes in two years. PyroAg Wood Vinegar will play a significant role in this growth. There is no turning back to old and archaic horticultural practices. Products such as PyroAg Wood Vinegar is the way forward.”
